Orbit Studio

Interactive Business Website

DEVIXO SOLUTIONS

Web Development Internship | Task 02

Student Name: Hassan Asad

Internship Domain: Web Development

Organization: Devixo Solutions

Task Number: Task 02 - Interactive Business Website

1. Objective

The objective of Task 02 was to create a fully responsive, multi-page business website using HTML5, CSS3, and vanilla JavaScript. Orbit Studio is a fictional creative studio that designs and develops websites for small businesses. The website introduces the studio, explains its services, presents sample projects, and provides a contact form.

2. Technologies Used

HTML5: Structures the five pages and their content.

CSS3: Provides visual styling, responsive layouts, and light/dark themes.

Vanilla JavaScript: Powers interactive elements, filtering, and form validation.

3. Website Structure

index.html - Home page and hero image slider.

about.html - Studio introduction.

services.html - Services and FAQ.

portfolio.html - Sample projects and category filters.

contact.html - Contact form and contact details.

css/style.css - Shared styling, themes, and responsive layouts.

js/main.js - JavaScript interactions.

images/ - Website photography and portfolio mockups.

4. Design Approach

The website uses the Studio Tangerine color palette with warm off-white backgrounds, dark text, and orange accents (#F26B3A). Its dark theme uses Midnight Navy backgrounds, light text, and a brighter orange accent. The layout emphasizes clear navigation, readable headings, project imagery, and responsive spacing.

5. Website Features

1. Responsive navigation menu: Navigation adapts to smaller screens.

2. Hero image slider: Previous/next controls and automatic slide changes.

3. Light/dark theme toggle: Switches themes and saves the selected preference.

4. Portfolio category filters: Lets visitors browse projects by category.

5. Animated counters: Animates numerical statistics.

6. Contact form validation: Checks fields and displays browser confirmation.

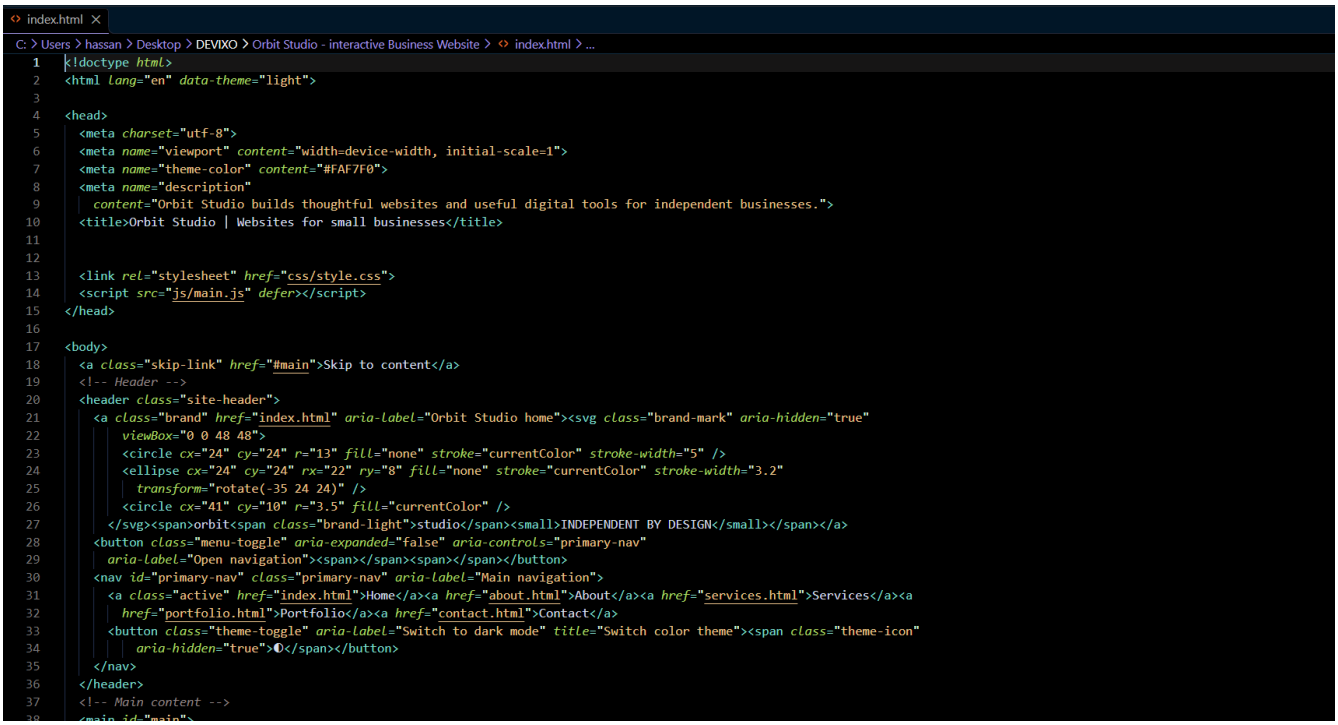

7. Scroll-to-top button: Returns visitors to the top of the page.

The Services FAQ expands and collapses using native HTML details elements.

The contact form does not send messages to a server. No typing animation is included.

9. Conclusion

Orbit Studio is a five-page interactive business website developed using HTML5, CSS3, and vanilla JavaScript. The project provided practical experience with multi-page site structure, responsive styling, navigation, theme switching, project filtering, and front-end form validation.
